INTRODUCTION

This manual provides the instructions and schedules necessary to conduct recorder counts in Sioux City for the combined programs during the summer of 1978.

The schedule combines different programs with a special recorder traffic count program being conducted in Sioux City by the Iowa Department of Transportation in cooperation with the Federal Highway Administration.

Traffic recorders will be placed at specified locations for one or more 24-hour periods. The locations for the special traffic count program were selected by random statistical sampling of the following street systems in Sioux City. The number of counts for each system are shown below.

<u>223</u>	Local City Streets
<u>74</u>	Arterial Streets
<u>15</u>	Freeways
<u>29</u>	Expressways
<u>36</u>	Screenline locations of the Urban Transportation Program
<u>377</u>	Total number of counts

FIELD INSTRUCTIONS

1. General

The recorders will be set so that data will be gathered for a full 24 hours for the dates specified in the schedule. These recorders will be set, checked, and picked up according to the instructions in the recorderman's manual.

2. Schedule

The following example is taken from the count schedule which will be used in Sioux City.

SIOUX CITY RECORDER STUDY

SUMMER 1978

<u>Date</u>	<u>Station No.</u>	<u>Recorder Location</u>	<u>Between Points</u>	<u>Street Type</u>	<u>Page No.</u>
June 7, '78	1.1	W. 15th St.	Harris St. to Blair St.	X-1	23-A
June 7, '78	1.2	Kings Highway	Just East of Perry Way	X-2	6-B
June 7, '78	1.3	Macomb Ave.	Cecelia St. to S. Mulberry St.	X-2	38-B

Date: This column indicates the date on which the count shall be made. The count period shall begin and end at midnight on the day(s) the count is scheduled. This means that the recorder must be set out on the day before the count and picked up on the day following the count.

Station Number: The station number is used to identify a specific day within the count program and the exact recorder location(s) for that day. The number to the left of the decimal indicates the workday of the count program in chronological order. The number to the right of the decimal identifies recorder locations for specific workdays within the count program.

Recorder Location and Points Between: These columns are self-explanatory.

Page Number: This number refers to the page on which the count location is shown on a map.

3. Alternate Location and/or Dates

Whenever a count cannot be completed, the following instructions must be followed in selecting an alternate location and/or date for the original scheduled location. This is extremely important and must be done in order that all counts will be completed. When an alternate location or date has been used, it should be marked off to prevent it being used twice.

Street Type A

When a count is lost for any reason, go to Appendix A and select a new location and date for that stratum level. If there are no remaining alternates for that stratum, go to Appendix D and select a new date. Then set the last scheduled location, whether it was an alternate or the original scheduled location, on the new date.

Street Type B

When a location cannot be set as scheduled, go to Appendix B and select the next available location and set that location. If the count is lost during the scheduled time, go to Appendix D and select the next available date and reset the same location. If the original location cannot be reset because of construction or similar reason, both a new date (from Appendix D) and a new location (from Appendix B) will be selected.

Street Type C

When a location cannot be set as scheduled or the count is lost during the scheduled time, go to Appendix C and select the next available date and corresponding station number for that type. (freeway, expressway, or screenline) If no more available dates, select the next available date from Appendix D.

Street Type X

When a location cannot be set as scheduled, go to Appendix X and select the next available location for that stratum. Use the original

Street Type Z

When a location cannot be set as scheduled or the count is lost during the scheduled time, go to Appendix Z and select the next available date and station number. Then reset the recorder at the original location.
